MILK RECORDING SUMMARIES

This section is usable in 2 ways:

First - as a place to record a sample monthly (1 day) milk production (This might be recorded for instance every 15th of the month).

Second - as a running total of amount of milk actually produced. [This would involve totalling the daily milks as kept in the daily milk sheet and placing each month's total in the appropriate column (TOTAL THIS MONTH) - One line per month until a lactation finishes. Then the cumulative (TOTAL THIS LACTATION SO FAR) is gotten by summing the previous accumulation with the current month's total].

N.B. (1) Either or both of the above uses can be made of this milk section depending on farmer/project preference and farmer ability. And either use of this section will provide useful management information.

(2) The lactation summaries Table (for 6 lactations) at bottom of page 4 may be completed at the end of each lactation (when the cow has dried) with the extensionist's help where needed. For lactations after the 4th (and breeding cycles after 5th) note that a new (Second) card is required for that cow.

CALCULATIONS OF INTERVALS (IN NUMBER OF DAYS) FOR CALVING NUMBER

	1	2	3	4	5	N.B. DESIRED TO BE ABOUT
CALVING TO 1ST SERVICE	150	90	42	80		60
CALVING TO CONCEPTION	275	90	175	195		80-100
CALVING TO CALVING	557	374	457			365
