

Table of Contents

Preface	11
Welcoming address	12
Opening address	13
THEME 1: THE STATUS OF NATURAL RESOURCES IN THE HIGHLANDS	
Diversifying cropping systems in the mountainous landscape of Galessa, Ethiopia	17
Abstract	17
1. Introduction	18
2. Methodology	18
3. Results and discussion	19
3.1 Diversity in traditional cropping systems	19
3.2. Alternative crops for diversification	20
3.3. Challenges of diversification and future courses of actions	22
4. Summary and conclusion	22
References	23
The status of animal feeds and nutrition in the West Shewa Zone of Oromiya, Ethiopia	27
Abstract	27
1. Introduction	28
2. Features of the West Shewa Zone	29
2.1. Agro-ecology	29
2.2. Human population	29
2.3. Land-use pattern	29
2.4. Livestock resources	29
2.5 Feed resources	29
2.5.1. Basal diet	29
2.5.2 Grazing pasture	30
2.5.3 Crop residues	30
2.5.4. Agro-industrial/industrial by-products and compound feeds	31
3. An overview of research findings	31
3.1. Native pasture	31
3.1.1. Botanical composition	31
3.1.2. Productivity of natural pasture	31
3.2. Crop residues	32
3.2.1. Chemical composition	32
3.2.2. Digestibility and energy value	32
3.2.3. Voluntary intake	33
3.2.4. Rumen degradability characteristics	33
3.2.5. Animal performance based on crop residue	33
3.2.6. Strategies to enhance the utilisation of crop residues as livestock feed	34
3.3. Agro-industrial by-products	34
3.3.1. Availability	34
3.3.2. Nutritional characteristics	35
3.2.3. Improved forage and pasture crops	35
4. An overview of on-farm testing and technology transfer efforts	35
4.1. Forage development efforts on farmer's field	35

4.2. On-farm testing of nutritional interventions in various farming system	35
4.2.1. Multi-nutrient block and supplementary protein source	35
4.2.2. Use of urea treated crop residue in ruminant diet	35
5. Conclusions and recommendations	36
References	36
Limitation and potential of major soils in the highlands of West Shewa, Ethiopia	50
Abstract	50
1. Introduction	51
2. Major soils of West Shewa	51
3. Soil physical and chemical characteristics affecting agricultural productivity	51
3.1. Water-logging / poor drainage	51
3.2. Soil acidity	51
3.3. Low organic matter and total N contents	52
3.4. Available P	52
4. Major causes of fertility decline	52
4.1. Low inherent soil fertility and depletion of plant nutrients	52
4.2. Limited agricultural inputs	52
4.3. Inappropriate soil management practices	52
4.4. Soil erosion	52
5. Results of investigations carried out to improve soil productivity in the highlands of west Shewa	53
5.1. Mineral fertilisers (NP)	53
5.2. Organic fertilisers and improved cultural practices	53
5.2.1. Green manure	53
5.2.2. Farmyard manure (FYM)	53
5.2.3. Biological N-fixation	53
5.2.4. Crop rotation	54
5.2.5. Lime, rock phosphate and agricultural by-products	54
5.2.6. Improved drainage	54
6. Conclusions and recommendations	55
References	55
Soil nutrient stocks and fluxes under smallholders' mixed farming system in the central highlands of Ethiopia: research experiences from the Galessa and Gare areas	62
Abstract	62
1. Introduction	63
2. Materials and methods	63
2.1. Case study sites	63
2.1.1. Physical settings	63
2.1.2. Farming systems and land-uses	63
2.2. Approaches to data collection	64
2.2.1. Household survey and farm monitoring	64
2.2.2. Land-use mapping and soil sampling	64
2.3. Nutrient balance	65
3. Results and discussions	65
3.1. Soil fertility gradients and associated management diversity	65
3.1.1. Soil fertility gradients	65

3.1.2. Diversity of soil fertility management	66
3.2. Differently resource endowed farm households: perception of soil fertility management	67
3.3. Is agro-ecosystem sustainability threatened? A nutrient balances perspective	68
3.3.1 Nutrient balances	68
3.3.2. Stocks and flux rates	68
4. Conclusions	68

References	69
-------------------	----

An overview on the distributions, status, uses and research needs of selected indigenous tree and shrub species in the Highlands of Ethiopia	76
---	----

Abstract	76
-----------------	----

1. Introduction	77
2. Vegetation distribution	77
2.1. Closed broadleaved forests	77
2.2. Closed coniferous	79
2.3. Bamboo and palms	80
3. Forest status	80
4. Uses	81
5. Research needs and factors affecting forestry research	83
5.1. Internal factors	83
5.1.1. Ineffective structure	83
5.1.2. Inefficient utilisation of available capacity	83
5.1.3. Lack of synergy or coordination	83
5.1.4. Weakly linked to development	84
5.1.5. Lack of interaction with end users	84
5.1.6. Leadership and coaching difficulties	84
5.2. External factors	84
5.2.1. Policy and legislation	84
5.2.2. Unattractive career path	84
5.2.3. Costly international partnership	84
6. Recommendations	84
6.1. Establish a self-reliant independent institution	84
6.2. Paradigm shift to address relevant issues	85
6.3. Improved access to resources	85
6.4. Networking and partnership	85

References	85
-------------------	----

Woody biomass in the 21st century: A global perspective	87
--	----

Abstract	87
-----------------	----

1. Introduction	88
2. The current biomass boom	88
3. The future role of woody biomass	89
4. Conclusions	91

References	91
-------------------	----

THEME 2: WOODY AND HERBACEOUS BIOMASS AS FODDER AND ORGANIC FERTILISER SOURCES

Indigenous tree and shrub species for soil fertility improvement in Galessa and Jeldu areas, Western Shewa, Ethiopia	95
Abstract	95
1. Introduction	96
2. Materials and methods	96
3. Results and discussion	97
3.1. Tree and shrub species identified and ranked for soil fertility improvement	97
3.2. Green biomass nutrient concentration and other quality characteristics	97
3.3. Soil properties under the indigenous tree and shrub species	98
4. Conclusions	98
References	99
Targeting various organic resources and legume best bets to various system niches to reverse decline in land productivity in East African Highlands	107
Abstract	107
Utilisation of the biomass of trees and shrubs as organic fertiliser source: Experiences from Holetta Agricultural Research Center	108
Abstract	108
Indigenous tree and shrub species for fodder production in Galessa and Jeldu areas, West Shewa, Ethiopia	109
Abstract	109
1. Introduction	110
2. Materials and methods	110
3. Results	111
3.1. Household and farm characteristics	111
3.2. Tree and shrub species identified and ranked for fodder production	111
3.3. Mineral composition of the fodder tree and shrub species	111
3.4. Chemical composition of the tree and shrub species	112
4. Conclusions	113
References	113
Experiences on utilisation of indigenous fodder trees and shrubs in Kenya	119
Abstract	119
THEME 3: TENURE AND TECHNOLOGY DISSEMINATION	
Land tenure security and adoption of natural resource management technologies in Ethiopia	123
Abstract	123
1. Introduction	124
2. Reasons for the divergence between the optimal private and social rates of natural resource utilisation	125
3. Evolution of the land tenure systems in Ethiopia	127
3.1. Land tenure prior to 1975	127

3.2. Land tenure from 1975 to 1990	128
3.3. Land tenure since 1991 to date	129
4. Empirical evidence of the linkage between the degree of tenure security and adoption of soil conservation practices	130
4.1. Data and study area	130
4.2. The empirical model and choice of variables	130
4.3. Empirical results	131
4.3.1. Adoption rate and pattern of soil conservation technologies	131
4.3.2. Empirical results of the Tobit soil conservation adoption model	131
5. Conclusions and policy implications	133
References	135
Scaling up of natural resource management technologies: Experiences and issues	140
Abstract	140
1. Introduction	141
2. Scaling up of agricultural technologies in EIAR	141
3. Issues of scaling up NRM technologies / information	143
3.1. Systems' approaches	143
3.2. Types and definitions of scaling up	144
3.2.1. Quantitative scaling up	144
3.2.2. Political scaling up	145
3.2.3. Organizational scaling up	145
3.2.4. Functional scaling up	145
3.3. Institutionalization	146
3.4. Elements of effective scaling up	146
3.4.1. Incorporating scaling up considerations into project planning	146
3.4.2. Capacity building	147
3.4.3. Information and learning	147
3.4.4. Building linkages	147
3.4.5. Engaging in policy dialogue	148
3.4.6. Sustaining the process (funding)	148
References	149
WORKSHOP DISCUSSION OUTCOMES	153
